Patent Protection!

More good news this month, this time coming from the Japanese Patent Office, who has officially granted us a new patent. While we already have multiple domestic patents protecting our novel computing technology, it's critical that we obtain international coverage as well. Details below.

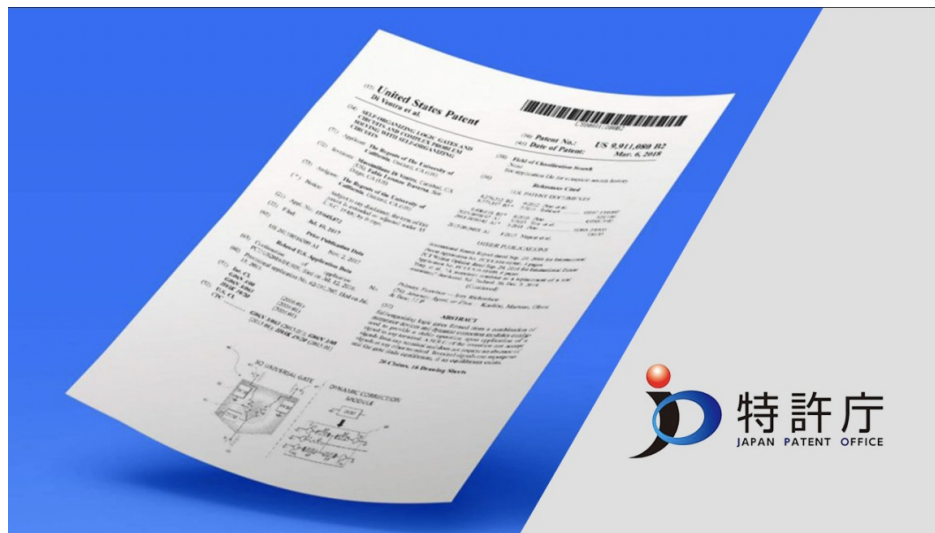

Did someone say blog? Starting next month, we will begin releasing a series of blogs ranging from topics like quantum computing, satellite communications, and complex optimization problems across industry where MemComputing is delivering a positive impact. Be sure to keep your eyes out!

Social Media: We did it. 500 followers on LinkedIn. Next milestone: 1,000. If you haven't done so already, follow us here to stay up to date: <https://www.linkedin.com/company/memcomputing/>

New Patent

Very pleased to announce that we've officially been issued a new patent from the Japanese Patent Office for our technology. This marks our first foreign patent, further strengthening our IP position and coverage of our technology on a global scale.

"MemComputing is focused on continual innovation to deliver groundbreaking computing performance that provides a competitive advantage to our customers," said John Beane, CEO of MemComputing, Inc. "Our clients rank in the Global 2000, and each serves a global audience. Therefore, we must protect our intellectual property locally and abroad. This is one of many foreign and domestic patents we expect to announce in the coming months and years."
